The proteins encoded by the gene cluster are useful for producing peptides and/or polyketide metabolites, especially bleomycin or bleomycin analogues. They are also useful for chemically modifying biological molecules to produce practide methyl groups, and for coupling amino acids and fatty acids. They may be reacted with an apo-carrier protein and coerayme A to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazolime and bithiazolime and bithiazolime, bithiazolime, bithiazolime and be used to produce microbial metabolites. The BLM gene cluster may also be used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    348

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the assential genes themselves and the discovery of novel antibiotics, the assential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneunoiae, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the antisense nucleic acids can also be used for antibiotic development. The antisense nucleic acids can also be used to antibiotic an be used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to ocreen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an expressent and a wide variety of crealular proliferation protein.

                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antiblocies, the essential genes themselves and the discovery of novel antiblocis, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The novention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences are selected of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up tl10 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AAH75903-AA The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella preumoniae, Pseudomonas aeruginosa and Enterocccus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7;

programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.
prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used and to obtain antibodies capable of binding to the expressed proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    67 ARLVGLTGIDDAARALSKSLADVNVKCDFVSVPTHPTITKLKVLSRNQQLIRLDFEEGFE 126

ADP-heptose synthase (EC 2.7.-.) [imported] - Salmonella enterica subsp. enterica servar Typhi
C; Species: Salmonella enterica subsp. enterica servar Typhi
C; Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 27-Nov-2001
C; Accession: AG0891
C; Accession: AG0891
C; Accession: AG0891
C; Accession: AG0891
C; Authors: Parry, C; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J.; Church
A; Authors: Parry, C; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J.; Stevens,
A; Title: Complete genome sequence of a multiple drug resistant Salmonella enterica se
A; Reference number: AB0502; PMID:11677608

Submitted (NOV-2001) to the EMBL/GenBank/DDBJ databases.
--- CATALYTIC ACTIVITY: ATP + D-ribose = ADP + D-ribose 5-phosphate.
--- PATHWAY: Ribose metabolism; first step.
--- SIMILARITY: BELONGS TO THE PFKB FAMILY OF CARBOHYDRATE KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    176 IDP----KGTDFERYRGATLLTPNLSEFEAV----VGKCKTEEE----IVERGMKLIADY
